DOCKET NO. 3066.001

p.2

CLEAN AMENDED PARAGRAPHS/SECTIONS/CLAIMS

In the Claims:

Amend the following like-numbered claims:

- 1.(twice amended) A paintbrush holder comprising: a clamp for engaging a rim of a paint can;
- a magnet for engaging a ferrule of a paintbrush; and
- a resilient member having a proximal portion attached to the clamp and having a distal portion attached to the magnet wherein the resilient member has a force constant selected to produce a displacement of the distal portion when the paintbrush is subjected to a mechanical shock so that the paintbrush does not slide off the magnet.
- 2.(twice amended) The paintbrush holder of Claim 1 wherein the resilient member is a spring.
- 3. (twice amended) The paintbrush holder of Claim 1 wherein the resilient member is a length of resilient material.
- A.(Lwice amended) A paintbrush holder comprising: a resilient member having a proximal portion attached to a clamp for engaging the rim of a paint can and a distal portion attached to a magnet for engaging a ferrule of a paintbrush wherein the resilient member has a force constant selected to produce a displacement of the distal portion when the paintbrush is subjected to a mechanical shock so that the paintbrush does not slide off the magnet.
- 5.(twice amended) The paintbrush holder of Claim 4 wherein the resilient member is a spring.

DOCKET NO. 3066.001

8. (twice amended) The paintbrush holder of Claim 4 wherein the resilient member is a length of resilient material.

- 7. (amended) A paintbrush holder comprising:
- a magnet for engaging the ferrule of a paintbrush;
- a clamp for engaging a rim of a paint can; and
- a resilient member having a proximal end attached to the clamp and a distal end attached to the magnet wherein the resilient member has a force constant selected to produce a displacement of the distal end when the paintbrush is subjected to a mechanical shock so that the paintbrush does not slide off the magnet.
 - 13. (amended) A paintbrush holder comprising:
 - a magnet for engaging the ferrule of a paintbrush;
 - a magnet holder for bonding to the magnet;
 - a clamp for engaging a rim of a paint can; and
- a resilient member having a proximal end attached to the clamp and a distal end attached to the magnet holder wherein the resilient member has a force constant selected to produce a displacement of the distal end when the paintbrush is subjected to a mechanical shock so that the paintbrush does not slide off the magnet.
- 17. (amended) The paintbrush holder of Claim 13 wherein the force constant of the resilient member is selected to limit acceleration of the paintbrush to no more than 0.75 a.
- 20. (amended) The paintbrush holder of Claim 1 wherein the force constant of the resilient member is selected to limit acceleration of the paintbrush to no more than 0.75 g.
